Later, I tried the same with a valid product key, and this time I got the following error: (Screen capture from Google Drive) I can try with a certain Google Account, but not all of them work. The other issue is, that the Kiosk application asks for the product key for the currently active license, and it shows an exclamation mark. I can only activate via the Kiosk application, because this is the only application that recognizes the product key. The product key I received is valid, because I was able to activate the product on another computer with the same product key, but the different computer is not the currently active license. This is a pretty strange behavior, because the standalone Kiosk app seems to recognize the product key. I do not want to buy another product, because this is still an active license. The other computers are running Windows 8.1 Enterprise. A: If you don't want to buy a new license, you can downgrade your current license to Trial. Run the Kiosk app, open Product Activation, then choose Trial. You will be presented with the standard information for activating a trial, which doesn't ask for a product key. There's two things to try: Contact Autodesk Contact the Kiosk developer (app or website) In the mean time, this might help: Download the trial version of Kiosk for Windows Post-irradiation treatment of radiation-induced rectal tumours with carboplatin and the enemaable doxorubicin formulation: a phase II trial. A study was performed to assess the combination of an enemaable doxorubicin formulation and carboplatin as post-irradiation treatment of radiation-induced tumours of the rectum. Patients who had been treated with irradiation for rectal cancer and who had been referred for treatment of symptomatic pelvic tumours, were entered into the trial. Treatment consisted of 3 cycles of daily doses of doxorubicin 40 mg in the enemaable formulation, alternating with 4 cycles of carboplatin (12 mg/m2) and 2 cycles of the enemaable doxorubicin formulation. Nine of 10 patients treated were assessable for response and toxicity. Among those 9, 6 had complete or partial response, 3 had no response. 82157476af
