An unknown event dated back at the turn of the common era affected the timeline and caused the two worlds collide. Now you must start the time machine and find hidden objects associated with the core events of the passed years to reconstruct the world chronology. Beware! The brink between the two worlds has become too vague, so, no one could predict what reality you end up at your next time leap. Any seek-and-find location may appear in its true or mystic perspective, while the item list is presented as either letters, numbers or symbols. Cleverly hidden on the scene, they are scattered randomly each time you enter the location, providing limitless i-spy experience.

As you journey to the past, you will collect souvenirs from each year you come to be in order to complete different tasks and earn experience points. As you progress through the storyline, you will witness the development of the modern civilization in its various aspects – science, technology, philosophy, politics, art and more. Each collection you complete displays the evolution of a particular instrument of human culture and make an assumption of its further advance.

It's time for the quest of your life! Find yourself in a twisted reality, search for hidden symbols, decipher the meaning of the secret numbers and open the gate to the future in this breathtaking sci-fi adventure game!
